Training Services

On-demand Training Libraries

Boost your Knowledge and Design Productivity

On-demand Training Libraries

The benefits delivered by sophisticated software tools are maximized with good training and information about best practice. This applies not only to individual users, but also to those designing overall flows and specific methods.

To complement other forms of training, a rich suite of e-learning resources is available for Mentor's tools. Throughout the 12-month subscription, you can take advantage of hands-on virtual labs, knowledge assessments and how-to videos. Chapters run from 10 to 15 minutes and are always available so you can learn at your convenience.

Content is organized into learning paths - recommended courses bundled to match typical roles such as system designer, architect, librarian or project administrator. Each learning path is organized into chapters, which in turn comprise granular topics optimized for remote learning. Students can return to their courses at any time during their subscription period. New content is added regularly and immediately available throughout a subscription.

- Library
- Learning Paths

- Lessons

Subscription Benefits:

- Self-paced tool training available anytime, anywhere: maximize student engagement, convenience & flexibility

- Role-based learning paths to help accelerate learning

- Unlimited access to videos, labs and lessons in our secure cloud environment

- Access to all new content added during the subscriptions including new release content

- Virtual labs for hands-on access to Mentor products

- Automatic alerts when new content is added or updated

- Assessment checks to confirm your knowledge

- HD video playback with pause, drag and rewind to find what you need

- Influence new content – suggest and vote on new learning topics

Virtual Labs

Courses can be taken using the Mentor Virtual Lab platform, a cloud environment providing remote access to fully functional Mentor software. Optimized for performance, the latest software releases are available for students to undertake guided hands on learning exercises without consuming their company licenses. All the data needed to complete each exercise is pre-loaded, together with instructions and troubleshooting tips. Students can progress part way through exercises, save their work, and return to the same point. Virtual Labs and associated hands on exercises are part of both the free and paid e-learning subscriptions.
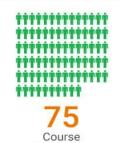

Assess your Knowledge

Take the knowledge skills and assessments to validate areas for learning opportunity.
